

GO KART AIR BOX POD FILTER – GK405 SERVICE & FITTING INSTRUCTIONS

WARNING – This filter **must** be treated with Unifilter “*Filter Fix*” filter oil at all times.

Fitting the filter:

Locate the pod over the ram tube air entry and secure firmly using either cable ties or self-tapping screws. Apply only a moderate to firm cable tie or screw pressure, sufficient to ensure positive pressure of the foam sealing section around the ram tubes. Do not overtighten as this may cause distortion and allow dust to enter under the seal.

Filter servicing:

Go Kart pods should be treated with Unifilter “*Filter Fix*” oil at all times. When servicing, wash pod with **mineral turps only** – dry completely – then retreat with “*Filter Fix*”

For more information contact Unifilter direct.
