

Yamaha XTZ 660
Part No. NU 2273 ST

WARNING – BOTH MAIN FILTER & PRE-CLEANER MUST BE OILED PRIOR TO USE.

FITTING INSTRUCTIONS

1. Pre-Cleaner

The pre-cleaner unit replaces the snorkel unit located on top of the air box under the seat and is designed as a pre-cleaner only. That is, it has been designed to remove large particles only and thus allow the main filter to work for longer periods between servicing.

Remove the original equipment air box snorkel assembly. Using the template below, drill a 6.5mm hole in the top of the air box. Use the bolt, washers and wing nut supplied to assemble the pre-cleaner and hand tighten.

2. Main Filter

The main filter is fitted with the location tab on the filter cage pointed inward into the air filter box. Location sealing pressure is therefore applied to the "U" channel plastic on the other end of the filter cage by the air box outer cover.

SERVICING & RE-OILING

Wash the filter in **mineral turps**, pad dry with a soft, absorbent cloth and re-oil. Conventional filter oils such as Unifilter's "Filter Fix" or Belray are recommended.
